COVID-19 Response Services

EnviroTrac offers disinfection and cleaning services in response to Novel Coronavirus (COVID-19).

According to reports, the COVID-19 virus can remain viable on surfaces for an extended period of time depending on the surface and/or conditions. Trained personnel using EPA registered and hospital grade disinfecting solutions will sanitize surface areas affected individuals may have contacted. All EnviroTrac personnel wear appropriate personal protective equipment (PPE) to prevent potential re-contamination of surfaces.

This service includes an ultra-low volume (ULV) misting or electrostatic spray of the air if the affected area is carrying aerosolized particles from an active case of the virus. This mist will eradicate any aerosolized particles allowing for a safer entry of decontamina-

tion personnel.

Following the misting, an EPA registered COVID-19 effective disinfectant is used to wipe all critical contact areas. The disinfectant is then applied to floors, walls, fixtures, and contents within the affected area. A 5-10 minute dwell time is allowed post wipe down for the disinfectant to eliminate the virus.

After the dwell time, a solution of warm water and detergent is used to removed residual disinfectant.

EnviroTrac can provide a one-time event response or ongoing precautionary disinfecting.

Services can be scheduled after hours to minimize business interruption. Pricing estimates will be provided depending on the needs of the business.
